## SEAT FASTENER

### Features & Benefits

#### Molded Fastener ® System

Hook-and-loop fasteners that can flexibly respond to the complex shapes and designs required for next-generation car seats.

There are few work procedures, and it can be easily installed by beginners, which can greatly reduce production costs.

In addition, compared to the conventional method, it is easier to dismantle the sheet, and it is easier to separate the sheet skin material from the urethane pad. Recyclability is greatly improved.

Mold-in fasteners® are registered trademarks of Kuraray Corporation.

## VELCRO

### Features & Benefits

#### Velcro®

We develop various products according to customer requests and applications.

- Textile hook-and-loop fasteners (Velcro®, Free Magic, Double-sided Magic®®)
- Molded hook-and-loop fasteners (Magi Rock®, General-purpose type/High strength type, Magic Band®, Mold Magic®)
- Special hook-and-loop fasteners (heat-resistant type, high-rupture type, antistatic type)
- Adhesive processing on the back of hook-and-loop fasteners according to the application and required performance

Velcro®, Magilock®, and Mold Magic® are registered trademarks of hook-and-loop fasteners of Kuraray Co., Ltd.

## SEAT BACK NET

### Features & Benefits

We produce machine-knitted elastic and non-elastic nets, and can provide a stable supply of products with high storability and design.

We propose designs for various parts such as seat backs, luggage, and trunk sides that meet the customer's requirements.

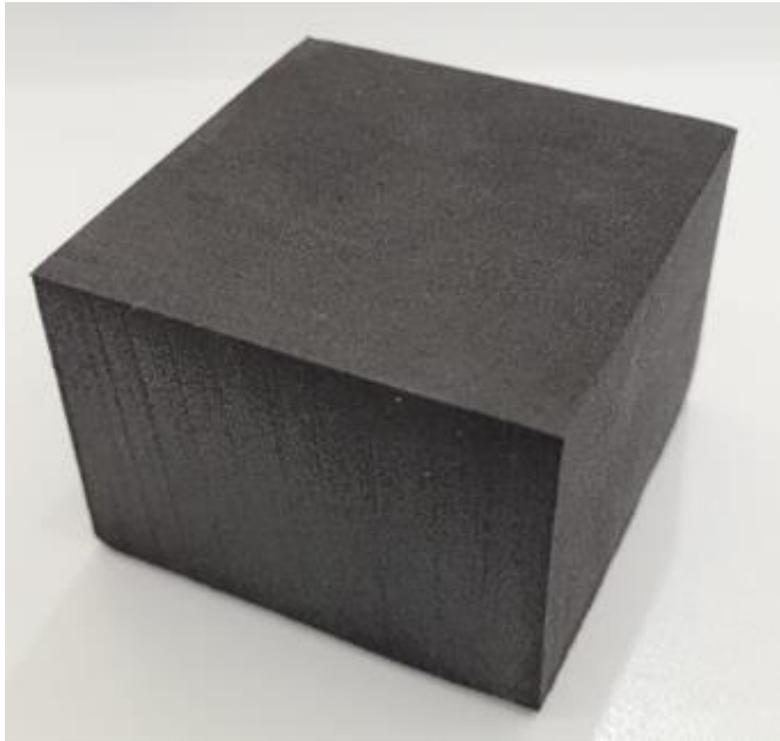

- By expanding and contracting the net, it is possible to increase the storage capacity compared to conventional
- Increased space around the legs in the back row
- Compatible with various types and designs (telescopic, non-telescopic, with lines)
